Introduction

Jugo is an AI-powered web application designed to help users improve the readability, consistency, and effectiveness of dashboards by evaluating them against IBCS (International Business Communication Standards).

By analyzing dashboard images, Jugo identifies whether a dashboard is IBCS-compliant or non-compliant, while focusing on whether the graph's scale starts at 0. Based on this it provides clear, actionable feedback on how to improve it. The tool is intended for analysts, business users, and decision-makers who want to communicate data more clearly and effectively.

Accessing Jugo's tool

Jugo is accessed through a web browser and does not require installation.

Supported Browsers:

- Google Chrome (recommended)
- Microsoft Edge
- Brave
- Safari

For best results, use Jugo on a desktop or mobile device. Mobile use is supported for viewing results and taking photos, but desktop is recommended for drag and drop uploads.

Quick start

On the homepage you get an example of a “before and after” dashboard, a quick overview of what the tool is and why you should use it. There is a “how to use tool” for users who want a quick step by step process.

Adding Value to Data

Jugo is a smart data-enhancement tool designed to help organizations unlock more value from their existing dashboards. By automatically analyzing structures, metrics, and reporting flows, Jugo identifies gaps, inconsistencies, and compliance risks—then provides clear recommendations to bring all data outputs in line with IBCS standards. Clients gain cleaner insights, stronger governance, and higher-confidence decision-making without changing the tools they already use.

Start your journey

How to use tool

How to use tool

We're here to optimize your dashboards

1

Press Start your journey

2

Upload picture of your dashboard

3

We analyze your graphs

4

You get the steps to an optimized - IBCS compliant dashboard

Then users can click the “Start your journey” button to begin. You will be taken to the upload page, where you can submit a dashboard for analysis.

Uploading / taking picture of a dashboard

Jugo supports two ways to provide a dashboard image:

Option 1: Upload an Image

1. Click Upload.
2. Select an image file from your device.
3. Supported formats: JPG, PNG.
4. Ensure the entire dashboard is visible in the image.

5. Click Upload to submit.

Upload Your Dashboard

Click or Drag & Drop your dashboard image here

Take PhotoUpload

Option 2: Take a Photo

1. Choose Take a photo.
2. Read guidelines to take a clear picture.
3. Allow camera access when prompted.
4. Take a clear photo of the dashboard.
5. Review the image and press upload.

Capture Photo

Make sure the dashboard is clearly visible, well lit, and fills the entire screen. Avoid reflections, glare, and empty white space around the dashboard.

Upload

Analysis Process

Once the image is submitted, Jugo automatically analyzes the dashboard. During this process, the tool evaluates:

- Alignment with IBCS principles
- Whether chart's scaling start at 0

Analysis typically takes a few seconds. No manual input is required.

Understanding the results

After analysis, Jugo will display one of the following outcomes:

IBCS Compliant

The dashboard aligns with core IBCS principles and follows recommended visual and structural standards.

Non-Compliant

The dashboard does not fully comply with IBCS standards. If charts don't start at 0 this is also indicated.

Reviewing Feedback and Recommendations

For non-compliant dashboards, Jugo provides feedback on whether the IBCS scaling rule is not met (if scaling started at 0 or not).

This is followed by some basic feedback and recommendations the user could change, with an added link users can use to get additional examples and explanations from the IBCS page itself.

The recommendation is designed to be actionable, allowing users to update their dashboards using their existing BI or reporting tools.

Troubleshooting

Image upload fails

- Check file format and size.
- Ensure stable internet connection.

Camera not working

- Confirm browser permissions.
- Try a different browser.

Unexpected results

- Ensure the dashboard image is clear and complete.
- Review image quality guidelines.
